## GROWFOOD CELEBRATES 10 YEARS OF FEEDING SC

BY SAMANTHA DAY

GrowFood Carolina started as an experiment by the Coastal Conservation League's Food and Agriculture program to push back against the conversion of rural land to urban uses. Small farms lacked the infrastructure that was available to large-scale and industrial farms, forcing them to accept offers from developers looking to purchase their land.

So, starting with a partnership of just five farmers and producers, GrowFood Carolina got their start in 2011 with the objective of creating a stronger rural economy for South Carolina farmers. As a food hub, GrowFood provides small local farms with the sales, marketing, logistics, warehousing, and distribution functions of a business. They are still growing and now serve about 85 farms with about 5,000 acres of land throughout the state, according to General Manager Anthony Mirisciotta.

In 10 years, their gross sales have reached \$10.5 million, with 80% of that going back to South Carolina's small farmers.

Their warehouse is located just off I-26 in downtown Charleston. Their original target included wholesale customers –

restaurants, Whole Foods, Harris Teeter, Earth Fare, and the like. GrowFood's restaurant accounts are mainly in Charleston, but they make deliveries in Hilton Head, Bluffton, Columbia, Greenville, and Savannah. Before the pandemic, 75% of their sales were to these restaurant accounts that faced strict guidelines and shutdowns.

GrowFood Carolina needed to react quickly, thus their Soil to Sustenance food

box program was born. The driving component of their business is giving back to farmers by controlling their supply and demand, and during the pandemic this was something they couldn't do. Their food box program is open to consumers for

a weekly socially distanced pickup of fresh produce from within 120 miles of Charleston. They also accept donations to support their goal of delivering 100 boxes per week to people in need across the Lowcountry. Their quick adaption and determination kept their

warehouse doors rolled up and the support for small farmers coming in during the pandemic.

Since restaurants have reopened, 50 to 60% of the original restaurant accounts have come back to GrowFood. However, the more upscale establishments haven't been seeking the high-priced specialty items they previously were.

Exciting expansion and opportunities are on the horizon as well. GrowFood will be making a move from their current 4,000 square foot warehouse to 12,000 square foot warehouse just a few blocks away. This expansion will not just allow for more cold storage and space but will help expand their entire operation. Being the first food hub in the state, GrowFood Carolina has paved the way for six other food hubs to emerge, connecting more local foods to more local markets.

## NEW TERMINAL BOOSTS SC PORTS

The other week, I had the opportunity to visit the South Carolina Ports' new Hugh Leatherman Terminal in North Charleston, which opened in March. It was an impressive sight – and an important one for South Carolina farmers.

The new 286-acre terminal is the country's first new container terminal in more than a decade. It expands the capacity of the Port of Charleston: Phase One of the Leatherman Terminal adds about 700,000 TEUs (that's Twenty-foot Equivalent Units, a measure of cargo capacity – It's what you see being pulled on the highways around the state) of throughput capacity to the Port of Charleston. When fully built, the terminal will add 2.4 million TEUs of throughput capacity to the Port of Charleston, doubling the port's existing capacity.

The Port of Charleston handled over two and a half million containers in the fiscal year that just ended, a 9.6% increase from fiscal year 2020 and the best year on record. Our state's ports generate nearly \$63.4 billion in annual economic activity.

Between the new terminal and the Charleston Harbor Deepening Project that is scheduled for completion next year, South Carolina is poised to become an even greater force in the import/export scene. The two inland ports – in Greer

and Dillon – are a key component as well.

Our ports are so important to agribusiness. In 2020, 23.8% of exports through the Port of Charleston were forest products – the No. 1 export – and 13.4% of exports were foodstuff and ag materials. Together, agribusiness products make up more than one-third of all exports.

As for imports, 6.6% of imports through the Port of Charleston were forest products and 4.9% of imports were foodstuff and basic ag materials.

Over the years, the Authority has introduced cotton fumigation and grain elevators to support the regulation of shipping ag products, ensuring shippers and consumers of quality products and shipping methods. They're a great supporter of agribusiness in our state and across the country.

The use of refrigerated shipping containers, often called reefer containers, has allowed fresh food products to reach farther than ever before. Poultry exports have benefitted from the addition of the cold storage facilities near the port. Luckily, the new terminal supports a refrigerated container yard with new systems and technologies to keep things cool. I got a glimpse of that on my tour.

I appreciate all the work that our state, local and federal leaders have done to make this new terminal a reality.

*Hugh Leatherman*

UPCOMING EVENTS

**Sunset Goat Yoga at Split Creek Farm**  
August 20 • 7 – 8 pm  
Enjoy an hour of relaxing yoga with the adorable and friendly goats of Split Creek Farm. Half of all proceeds go directly back to the nonprofit Goats4Goodness. In addition, local photographer Paige Ramsey will be taking professional photos throughout our session, so you can be fully present and reminisce on the hilarity afterwards! \$40/person.  
**Split Creek Farm**  
3806 Centerville Road, Anderson  
andersonyogacenter@gmail.com  
Register online at [andersonyogacenter.com/schedule](https://andersonyogacenter.com/schedule)

**Saturday Farm Tours**  
August 21 & 28 • 10 am, 11:30 am, 1:30 pm  
Our farm tours give you an up-close and personal view of life on Herd It Here Farm. Learn about the wonderful world of alpacas; feel their luxurious fiber and how it's used to produce fabulous products. Take a selfie with Gidget, our goofy alpaca ambassador, and learn directly from the farm owner how he takes care of their needs. Then experience our Silkie chickens, pygmy goats and fainting goats, and shop in our Country Store, full of alpaca fleece products and other local artisan items. Tours must be pre-booked and are available each Saturday at 10 am, 11:30 am and 1:30 pm. Admission: Adult \$10, Child (3-10) \$5, Child (under 3) free.  
**Herd It Here Farm**

**Grape Stomp Festival 2021**  
August 28 • 10 am – 6 pm  
Food, drinks, vendors, grape stomping, new wine, new friends...c'mon! Our food and music line-up is poised to be the best of the best with Jonny Poppers, Cafe Roux, Braised in the South, A Boy and His Dogs, and Holy City Cupcakes. Our music guests are local faves Mike Martin & the Beautiful Mess and headlining - Well Charged. As always, we'll have our grape stomping competition and annual Lucille Ball look-a-like contest. \$40 for entrance, a tasting, and t-shirt or \$30 for entrance and shirt plus a \$10 parking pass (one per car). If you want to stomp in a contest it's \$20 per stomping pair (we can pair you, if needed).

The South Carolina Market Bulletin

(ISSN 0744-3986)

The *Market Bulletin* is published on the first and third Thursday of each month by the SC Department of Agriculture, Wade Hampton Building, Columbia, SC 29201. Periodicals postage paid at Columbia, SC 29201.

Postmaster, send address changes to:  
SC Market Bulletin, PO Box 11280, Columbia, SC 29211

POLICIES FOR ADVERTISING

For full policies, visit:  
[agriculture.sc.gov/market-bulletin/market-bulletin-policies](https://agriculture.sc.gov/market-bulletin/market-bulletin-policies)

Only ads pertaining to the production of agricultural products and related items are published. Ads are accepted for South Carolina items, even if the seller lives out of state, provided the item is in state at the time the ad is published and at the time of sale.

Ads are published free of charge and in good faith. The *Market Bulletin* reserves the right to edit and verify ads but assumes no responsibility for their content.

Ads cannot be accepted from agents, dealers, or commercial businesses, including real estate. Sealed bids, legal notices, or consignment sales are not accepted.

SUBMITTING ADS

No matter the submission method, you must include the advertiser's name, complete address with zip code and county, and phone number with area code with your submission. Do not use all capital letters.

- **Email:** Send ads to [marketbulletin@scda.sc.gov](mailto:marketbulletin@scda.sc.gov). Put the words "Market Bulletin ad" in the subject line.
- **Online:** Go to [agriculture.sc.gov/market-bulletin](https://agriculture.sc.gov/market-bulletin). Select "Submit Market Bulletin Ad" and complete the form. If you include your email address, you will receive an automated reminder for a renewal.
- **Mail:** SC Market Bulletin, PO Box 11280, Columbia, SC 29211. You must use 8.5 × 11 inch paper.
- **Fax:** 803-734-0659

The deadline for submitting ads and notices is noon on Tuesday of the week **before** the publication date.

2021 LEGAL NOTICE

CALL FOR NOMINATIONS FOR CANDIDATES  
TO FILL A VACANCY ON THE SOUTH CAROLINA COTTON BOARD

Pursuant to the provisions of the “Agricultural Commodities Marketing Act” and the Marketing Order for South Carolina Cotton issued by the Agriculture Commission of South Carolina, NOTICE IS HEREBY GIVEN that the terms of office of the listed member of the South Carolina Cotton Board, expire on December 31, 2021, and, therefore, the listed vacancy shall occur at that time.

DISTRICT 1: Cleland Blain “Pete” Player III, Bishopville, SC

If you are interested in becoming a SC Cotton Board member, you will need to request a petition. This petition can be requested by calling (803) 734-9807, (803) 734-2217 or by emailing elloyd@scda.sc.gov . All petitions must be received by Friday, August 27, 2021. For a petition to be eligible/accepted, it must be signed

by no less than five Cotton producers from the counties of the district seat you are petitioning for.

Terms of office are for 3 years. To qualify, a candidate must be a resident of South Carolina and be actively engaged in the production of Cotton within the State of South Carolina for a period of no less than one year. Additionally, during that one-year period, candidate will have derived a substantial portion of his income there from and shall continue to do so during their term of office. The Cotton Board holds approximately 4 quarterly meetings per year to conduct their business. Reimbursement for mileage is paid for travel to and from meetings. In addition, a \$35 per diem is paid per meeting attended.

District 1 includes the Counties of Clarendon, Darlington, Georgetown, Lee, Sumter, and Williamsburg.

FRANCES PRICE, Chair  
The Agriculture Commission of South Carolina  
PO Box 11280, Columbia, South Carolina 29211

# CLEMSON RESEARCH FINDS USING SOIL MOISTURE SENSORS CAN INCREASE FARMERS' NET INCOME

BY DENISE ATTAWAY, CLEMSON UNIVERSITY

BLACKVILLE, S.C. – A Clemson University irrigation specialist has found using soil moisture sensors in fields can increase average net income by almost 20%.

Jose Payero, assistant professor and irrigation specialist housed at the Edisto Research and Education Center (REC), is conducting on-farm trials to show farmers how using soil moisture monitoring technology can help them irrigate more efficiently. Soil moisture sensors were installed in six fields with different soil types in Allendale, Barnwell, Hampton, Lexington and Orangeburg counties. Each field was planted with either cotton, peanut or soybean.

“Soil moisture sensors were installed in each sensor field, while no sensors were installed in the companion fields,” Payero said. “Based on agronomic and economic data collected, we found the increased net income ranged from \$87.30/acre to \$641.19/acre or 7.6% to 63.5%. The average increased net income for all the six farms was \$202.28/acre or 19.42%.”

The sensor fields were irrigated using center pivot systems. Farmers followed their standard irrigation practices to irrigate companion fields.

The farmers were trained to irrigate the sensor fields based on the collected soil moisture data using a few simple guidelines. They also were guided through installing and using the app to monitor the soil moisture level on their cell phones.

The technology the researchers are using is called the Clemson Water Management System. It was developed by Payero and uses sensors to collect and transfer data over a wireless network.

During the trials, soil moisture sensors were installed at four depths – 6, 12, 18 and 24 inches. Hourly data were collected automatically through a custom-made Internet-of-things (IoT) system, transmitting data to a Cloud server using a cellular network.

Although these results are for just one year, Payero said they look very promising. He and his team will continue on-farm trials on six farms in 2021 and another six in 2022 to see if the results hold.

“This easy-to-use, affordable soil moisture monitoring system will help growers enhance water-use efficiency and increase profits while substantially reducing water and energy use, erosion and leaching of chemicals such as pesticides and soil nutrients,”

Payero said. “It also will help growers apply water at optimum rates where needed.”

Joe Oswald is a fourth-generation farmer at JCO Farms in Allendale County. His family farm is participating in the study. They grow corn, soybeans, cotton, peanuts, oats, rye and sorghum, as well as run 150 head of Angus cattle. Because this is a study, farmers and researchers are learning as the research progresses.

“This year we have been fortunate in that we haven’t had to run irrigation much on cotton soybeans and peanuts,” Oswald said. “Because corn requires more water, we had to water it earlier in the summer when conditions were dry. As for watering based on sensors we have in our soybeans, we have irrigated twice with that pivot on the test when the moisture gets to the threshold of -40 kPa. We did not irrigate the other half of the field which is our control because we would not have normally irrigated beans at that time. The sensor-side of

the field has had 1 inch more of irrigation than the other half, so we have had an increase in water usage on the sensor-side.”

Oswald is learning how to adjust his system to adapt to crop irrigation requirements.

“We may need to raise the threshold on beans so that irrigation isn’t triggered as early,” he said. “The beans at that time were not in bloom yet and do not require as much water as they do once they start setting pods. That’s why we didn’t irrigate our side. I don’t know if that will result in a higher yield on the sensor-side but we will see after harvest. Over the past month we have not run much irrigation at all, we have been blessed with timely rains.”

Farmers who need more information or who would like to try using this technology can contact Payero at [jpayero@clemson.edu](mailto:jpayero@clemson.edu).

The on-farm studies are part of a \$500,000, 3-year project funded by the United States Department of Agriculture Natural Resources Conservation Service (USDA-NRCS) as an On-Farm Conservation Innovation Trial.

Payero is part of the Clemson Cooperative Extension Service Water Resources Program Team. This team consists of Extension specialists, associates and agents from around the state working together to address water quantity and water quality issues in South Carolina and beyond. The Water Resources Team conducts community outreach and education programs, public involvement opportunities and in-depth trainings and workshops for the citizens of South Carolina. The common goal of these services is to foster stewardship and sustainable management of water resources for current and future generations.

To contact a member of the Water Resources Program Team, go to [clemson.edu/extension/water/team.html](http://clemson.edu/extension/water/team.html).

This work is funded by the USDA-NRCS, under agreement number NR203A750013G010. Any opinions, findings, and conclusions, or recommendations expressed in this material are those of the authors and do not necessarily reflect the views of the USDA-NRCS or Clemson University.

Allendale County farmer Joe Oswald and Clemson researcher Dana Bodiford Turner install watermark soil moisture sensors for on-farm trials to show farmers how using soil moisture monitoring technology can help them irrigate more efficiently. Photo by Clemson University

## USDA INVESTS OVER \$21.8M TO BUILD AGRICULTURAL CAPACITY AT HBCUS IN THE NATION’S LAND-GRANT UNIVERSITY SYSTEM

The U.S. Department of Agriculture announced an investment of over \$21.8 million to 1890 Land-grant Institutions to support research at Historically Black Colleges and Universities at our nation’s Land-grant University System.

“Our 1890 Land-grant universities are an integral part of our nation’s fabric,” said Agriculture Secretary Tom Vilsack. “As USDA continues to work tirelessly to advance equity and provide greater access to nutritious and safe food for all Americans, especially to historically disadvantaged groups, this investment will strengthen the ability of our Land-grant Institutions to deliver innovative solutions that address emerging agricultural challenges impacting diverse communities.”

USDA’s National Institute of Food and Agriculture (NIFA) awarded over \$21.8 million to 1890 Land-grant Institutions to support 58 projects at Historically Black Colleges and Universities in the nation’s Land-grant University System and organizations as part of its Capacity Building Grants program. This is designed to build capacity for teaching, research and extension activities at eligible

institutions including curriculum design, materials development, faculty development, student recruitment and retention, and extension program development support. This research investment will strengthen the quality and diversity of our nation’s higher-education workforce, bolster our research and knowledge delivery systems, and equip 1890 Institutions with resources needed to better address emerging challenges and create new opportunities.

Examples of the 58 funded projects include:

- **South Carolina State University** will identify and analyze factors that contribute to the success of small farm and agribusiness-related operations in South Carolina. The goal is to determine why some small farmers are successful and others are not, then use that data to develop an agricultural and entrepreneurial leadership model to grow and sustain small farms that can be replicated by others.
- **Tuskegee University** will examine the impact of region and race on heirs property and community well-being by assessing three regions in Alabama—the Black Belt, the Tennessee Valley,

and the Wire Grass—to identify key focal points for Extension and outreach programming and policy engagement (\$300,000).

- **Kentucky State University** will address training needs of small-scale, minority and socially disadvantaged farmers and producers to develop strategies for handling produce and developing value-added products that are compliant with federal regulations and standards (\$249,583).
- **Delaware State University** in collaboration with the University of Maryland, Eastern Shore, will provide minority undergraduate students in food, agriculture, natural resources and human science disciplines with experiential learning to help develop leaders in the global food arena (\$299,939).
- **West Virginia State University** will examine the effects of storm events on water quality, greenhouse gas emissions and microbiome processes in the Kanawha River watershed to build research capacity in environmental and freshwater sciences and biotechnology (\$300,000).

# NEW PACKAGING COST-SHARE GRANT HELPS SMALL PRODUCERS

BY LAURAKATE MCALLISTER

Using funding from the USDA Specialty Crop Block Grant, the South Carolina Specialty Crop Growers Association is offering a new Packaging Cost Share Program.

Through this program, specialty crop growers can receive up to \$1,800 in reimbursements for packaging costs. The USDA defines specialty crops as “fruits and vegetables, tree nuts, dried fruits, horticulture, and nursery crops (including floriculture).”

Packaging is essential to specialty crop farmers and can often be expensive. Buying packaging,

especially sustainable packaging, is a topic that routinely comes up when we speak with growers. Many market outlets such as retail, farmers markets, and CSAs require specific packaging in order to deliver fresh, quality produce to consumers. This program is designed to help alleviate some of the financial burden that comes with farming and encourage growers to expand their market outlets.

Funding is very limited this first year and will be issued on a first come first serve basis until funds are depleted.

What is considered packaging? We recognize that growers use a variety of packaging options so this grant can be used towards the purchasing of items such as clamshells, labels, rubber bands, different sized bushel boxes, and other things a grower may need to get their products to consumers.

We hope with this new cost share program, South Carolina specialty crop growers can continue to be successful and are able to expand their reach in all market outlets.

To learn more, please contact the South Carolina Specialty Crop Growers Association at 803-734-2224 or [landerson@scda.sc.gov](mailto:landerson@scda.sc.gov).

## A VISIT TO BIG SMILE PEACHES

BY SAMANTHA DAY

Big Smile Peaches, located in Johnston, South Carolina, harvests 40 different varieties of peaches on their 4,000 acres of land. Peach season on ‘The Ridge’ runs from early May to the beginning of September – long enough for us all to get our peach fix.

This peach season they’re seeing the best coloring and largest fruit they’ve had in a decade. But like most industries, the pandemic has played a large

and negative role in this peach season. The Big Smile folks said pallet shortages, truck shortages, and peach prices that are comparable to the ones in the 1980s are affecting many South Carolina producers.

But even with the industry setbacks, about 90% of Big Smile’s crop travels to their customers in the Northeast or Midwest. The rest are primarily stocked in KJ’s Markets in the Southeast.

Did you know that fresh, tree-ripened peaches have an internal temperature of around 104 degrees? These peaches are then slowly run through a bath that brings their temperatures down to 40 degrees before they’re placed in cold storage.

Next year this fourth-generation farm will be celebrating their 90th year in business!
